New hydraulic tester with iPhone™ App saves time by emailing a test certificate while in the field

Webtec, the Cambridge (UK) based hydraulic measurement and control specialists, will be launching the next generation of 'productivity enhancing' hydraulic testers in April at Hannover Messe 2015.

Hydraulic testers enable a qualified service engineer to quickly and accurately diagnose a fault in a hydraulic machine, such as an excavator or tractor, ensuring only faulty parts are replaced and minimising the potential cost of downtime.

Available to order from June, service engineers will be able to use the new DHM to generate a certificate that can validate any work carried out on the machine and send it directly from the field to their customer. If the engineer creates "before & after" certificates, these can then be provided to prove that any fault has been rectified and the performance of the machine has been restored.

The new battery operated hydraulic tester talks via Bluetooth™ directly to a free-of-charge Webtec "app" installed on an Apple™ or Android™ Smartphone. The app takes the data from the tester and generates a certificate which includes all of the data required to validate the work carried out.

The report generated by the smartphone App is in a "pdf" format meaning the data presented cannot be edited and can therefore be trusted as an accurate representation of the state of the machine at that moment in time.

The DHM testers combine ease-of-use with professional reporting providing an affordable and time-saving solution for the busy hydraulic service engineer. With the ability to measure flow rates of up to 100 or 200 gpm at up to 6000 or 7000 psi, these new battery powered testers are ideally suited for both field or shop based testing of many agricultural and construction equipment systems. For fleet managers, the hydraulic test certificates produced by the DHM could also form part of a preventative maintenance program to reduce the occurrences of costly failures on site.

For further information on the brand new DHM series see www.webtec.com

About Webtec

Webtec designs, manufactures and distributes a range of hydraulic components and hydraulic test equipment for the mobile and industrial machinery market. Webtec has over 50 years' experience in the fluid power industry and specialises in flow control valves and flow measurement. The company, whose headquarters are based in St Ives, Cambridgeshire, UK is privately owned and employs a total of 58 people in the UK, France, HK and the US.
