

# **SV80 Series**

## **Diverter Valve**

A Diverter Valve provides an alternative to the standard directional control valve when a neutral (centre) position is not required. It allows flow to be directed into either of two lines which enables fast changing from one system to another, or from one system to tank thus providing an idling circuit.

Other applications may be as a safety lock preventing accidental operation of separate functions which should not operate together and the selection of attachments as on an agricultural vehicle.

#### **Specifications**

| Maximum Rated Pressure: |                           |  |  |  |  |  |
|-------------------------|---------------------------|--|--|--|--|--|
| Maximum Rated Flow:     |                           |  |  |  |  |  |
| Compatible Fluids:      |                           |  |  |  |  |  |
| Material:               | <b>Internal Material:</b> |  |  |  |  |  |
|                         | <b>Body Material:</b>     |  |  |  |  |  |
| Porting:                |                           |  |  |  |  |  |
| Weight:                 |                           |  |  |  |  |  |

Up to 210 bar, 3000 psi Up to 80 L/min, 21 US gpm Mineral oils to ISO 11158. Other fluids consult sales office Stainless Steel Cast Iron BSPP, SAE 2 kg, 4.4 lb

#### **Features**

- Flow may be directed by mechanically pushing the spool with spring offset or by a mechanical push pull operation in which case the valve stem is threaded or fitted with a moulded knob.
- Customer can select from one of two spool types allowing flow to be diverted from one line to another or from system to tank.
- A choice of port threads are available.
- Special versions also available.

### **Sales Order Code**

Please contact our technical sales team to discuss any special order requirements.
